9 inch Microbial FilterMitt Berm ™
2:1 Slope or Greater
2:1 Slope or Less

Certified Phase II Stormwater Inc.
9 inch Microbial *FilterMitt™* Berm

QUICK REFERENCE GUIDE

Microbial *Filtermitt™*	Used for	Vegetated Permanent erosion control
Microbial *Filtermitt™* Berm	Used for	Vegetated Permanent erosion control where a large range of anticipated water flow is expected
Microbial and *PowerBoost™* Mulch *EarthBlanket™*	Used for	Vegetated Permanent erosion control to prevent sheet flow, Stabilizes soil and prevents sediment loss on slopes of varying steepness.
Sediment *Filtermitt™*	Used for	Un-vegetated temporary erosion control
Sediment *Filtermitt™* Berm	Used for	Un-vegetated temporary erosion control where a large range of anticipated water flow is expected
Sediment *EarthBlanket™*	Used for	Un-vegetated temporary erosion control to prevent sheet flow, Stabilizes soil and prevents sediment loss on slopes of varying steepness.
Topdressing	Used for	Enhancing soil structure and performance to hold moisture while increasing the soils organic matter.
Microbial Inoculants	Used for	Adding a large number of beneficial microorganisms into the soil. Microbial Inoculants helps improve soil structure, fertility, and, ultimately, plant health, also inhibit diseases. Used in storm water management to remediate persistent hydrocarbons which contaminate sediments found in storm water by renewing the populations of active beneficial microorganisms.
Environmental fence	Used for	Protection of storm water management products, keeping intruders out of the wetlands, also allowing wildlife access to their habitat.

Certified Phase II Stormwater Inc.
9 inch Microbial *FilterMitt™* Berm

COMPOST PRODUCTS

EarthBoost™	Used for	Topdressing, potting mixes, gardens, and prescription soil blending.
PowerBoost™ Mulch	Used for	Useful in light erosion applications on gentle slopes, flat areas, or where lower water flows are anticipated. It also ideal for use as decorative and functional mulch for annuals, perennials, shrubs, and trees.
FiberRoot™ Mulch	Used for	Erosion control applications Microbial and Sediment *FilterMitt™* *EarthBlanket™*, also for woodland plant mulch.

EarthBlanket™ DEPTHS FOR VARIOUS RAINFALL RATES

Annual Rainfall Flow Rate	Total Precipitation (Rainfall Erosivity Index)	*EarthBlanket™* Depth (Vegetated Surface)	*EarthBlanket™* Depth (Unvegetated Surface)
Low	1 - 25 inches (20 – 90)	½ - ¾ inch (12.5 – 19mm)	1 – 1½ inches (25 – 37.5mm)
Average	26 – 60 inches (91 – 200)	¾ - 1 inch (25 – 50mm)	1½ - 2 inches (37 – 50mm)
High	> 51 inches (> 201)	1 - 2 inches (25 – 50mm)	2 – 4 inches (50 – 100mm)

Certified Phase II Stormwater Inc.
9 inch Microbial *FilterMitt™* Berm

SLOPES, SLOPE LENGTHS, and *Filtermitt™* DIAMETERS

Step 1: Select annual rainfall flow rate from charts below

Annual Rainfall/Flow rate	Precipitation/Year (Rainfall Erosivity index)	*Filtermitt™* Diameter (inches)
Low	1in. to 25 in.	12”
Average	26 in. to 50 in.	12” or 18”
High	51 in. and above	18”

State	Annual Rainfall inches/ year 2008
Massachusetts	43.84
Maine	43.52
Connecticut	44.39
New Hampshire	36.53
Vermont	33.69
Rhode Island	41.91

Step 2: Pick slope percent and length in feet for job.

Slope Percent	9 inch	12 inch	18 inch	24 inch	32 inch
5% and less	375	475	525	625	725
10%	185	240	275	375	475
15%	130	160	185	300	425
20%	95	120	135	250	375
25%	75	85	90	185	250
30%	55	70	85	120	185
35%	50	65	75	100	140
40%	45	60	70	85	110
45%	40	50	55	75	85
50%	35	45	50	60	60
75%	20	30	35	40	45
100%	10	15	20	25	30

Step 3: Pick *Filtermitt™* diameter.

Note: For areas not accessible by truck, use Alternative method which can be carried by hand.

Note: *Filtermitts™* Berms are used in areas where greater water flow is anticipated, used in conjunction with *Filtermitts™* .

GENERAL DESCRIPTIONS

Certified Phase II Stormwater Inc.
9 inch Microbial *FilterMitt™* Berm

PART 1. GENERAL DESCRIPTION Microbial *FilterMitt™* Berm

S 101-1 MATERIAL:

A. Microbial *FilterMitt™* Berm:
Detains sediment, absorbs orders and degrades volatile organic compounds allows water by-pass, and is a food resource for beneficial microorganisms, which remediate by metabolizing wood preservatives, petroleum products, pesticides
And both chlorinated and non chlorinated hydrocarbons in stormwater runoff from reaching water resources, prevents erosion and silting on embankments parallel to creeks, lakes, and rivers, prevents erosion and turf loss on roadsides, hillsides, playing fields, and golf courses.

B. Beneficial Microorganism Inoculation:
Need to meet the Phase II Stormwater Inc. standards. See table 3.

C. Fence:
Use a Certified Phase II Stormwater Inc. Professional. See Fig. 1 & 2.

S 101-2 INSTALLATION:

A. All Sediment Phase II Stormwater Inc. application/installation must be done by a certified Phase II Stormwater Inc. installer.

B. All invasive removals must be done by a Phase II Stormwater Inc. professional.

C. All Sediment Phase II Stormwater Inc. application/installation should be used for pre-construction, construction and post-construction.

D. Fence should be installed 1 Foot in front of *FilterMitt™* Berm See Fig. 1 & 2.

S 101-3 MAINTENANCE:

A. Apply beneficial microorganisms to the Certified Phase II Stormwater device every two months during the growing season to assure that the beneficial microorganisms meet the desired range as described in the Certified Phase II Stormwater Inc. specifications. Only when meeting these desired ranges can you be sure the Phase II Stormwater Inc. is remediation persistent contaminated pollutants found in the stormwater, as well as improving soil structure, and hydrological conductivity.

B. Apply beneficial microorganisms to improve the vigor and vitality of either planted or existing vegetation.

C. Remove any solid particles that have accumulated to one half the effective height of the stormwater filtering device.

D. Remove any invasive exotic or native vegetation that maybe disturbing the functioning of the stormwater filtering device.

PART 1. GENERAL (Continued)

S 101-4 BENEFICIAL MICROOGRANISMS INOCULATION:

- **A.** Improve soil pore space – Increases water infiltration.
- **B.** Feed on pollutants – Reduces contamination of water resources.
- **C.** Increase soil surface tension- Reduces movement of soil particles.
- **D.** Increase water storage in soil – Reduces water usage.
- **E.** Increase carbon storage in soils – Helps clean air.
- **F.** Improve plant nutrients uptake – Establishes healthier plants.

S 101-5 INVASIVE REMOVAL:

- **A.** Our recommendations prior to permit approval and prior final inspection, is to have a storm water maintenance plan that maintains the biology and removes the invasive for clean water & soil. The invasive cause destruction of our natural areas and threaten the biodiversity of our native plant species by taking up their places, and limiting how they function in the native ecosystem.

S 101-6 USE:

- **A.** Check dam & dikes.
- **B.** Permanent & temporary erosion protection.
- **C.** Vegetation & soil amendment.
- **D.** Where a large range of anticipated water flow is expected.

Certified Phase II Stormwater Inc.
9 inch Microbial *FilterMitt*™ Berm

PART 1. GENERAL INSPECTION

S 102 – 1 MATERIAL INSPECTION:

A. Installation Contractor submits a sample of materials [1 gallon] to a Certified Phase II Stormwater Inc. Testing Lab.

B. The "Certified Phase II…" Will send the Installation contractor, either a "Certificate of Materials Approval" or a list of recommendations that when completed as described will bring the existing materials into compliance with the criteria as set forth for Certified Phase II Stormwater Inc.

C. Upon receipt of "Certificate of Materials Approval" from a Certified Phase II Stormwater Inc. Testing Lab, the Installation Contractor will submit copies of the "Certificate " to the design professional, the regulating agency, and the property owner, or whoever submitted the permit.

D. The Installation Contractor will notify the Regulating Agency of the time and day the work will begin.

E. A sample of the Materials On-Site will be taken by a Certified Professional Phase II Stormwater Inspector, to verify that the materials that were "Certified" are the materials that are being installed.

F. The methods and procedures of the installation of the materials, as designed and specified in the Stormwater Pollution Prevention Plan will also be inspected, to assure that the installation also is in compliance.

PART 1. GENERAL

S 103-1 MONITORING and DOCUMENTATION

A. The property owner or site contractor is required to monitor the stormwater control device after every significant rain event, as specified and designed in the SWPPP

B. If it has been discovered that there were failures either due to the design or the installation of the devices, a written, dated document, and photos are to be placed on file.

C. The site contractor is to follow up with a Certified letter to the design professional and the installation contractor, stating the date, and the location of the failure, preferably accompanied with a photo description of the problem, requesting a site visit to resolve these issues within a timely manner.

.

D. The stormwater control devices are to be inspected periodically to assure that they meet all project requirements as described in the Certified Phase II Stormwater Inc. Manual and by a Certified Phase II Stormwater Professional Inspector.

PART 3.

INSTALLATION, MAINTENANCE, & POST CONSTRUCTION

S 301 MATERIAL:

A. Outside materials need to meet Certified Phase II Stormwater Inc. specifications in Table 1 ,100% organic hessian fabric (burlap), this woven fabric facilitates a 1/16" - 3/8" opening, is 100% biodegradable and does not need to be removed as it will be thoroughly utilized as a microbial food resource and will become incorporated within the organic materials..

B. Inside media needs to meet Phase II Stormwater Inc. specifications in tables 1,2,3.

C. Certified Phase II Stormwater Inc. Microbial *FilterMitt*™ benefits pre-construction,construction and post - construction phases of development.

D. Certified Phase II Stormwater Inc. Microbial *FilterMitt*™ Berm specifications meet the highest performance criteria.

E. Certified Phase II Stormwater Inc. Microbial *FilterMitt*™ Berm meets the AASHTO, EPA, State & Federal regulations.

F. All Certified Phase II Stormwater Inc. Microbial*FilterMitt*™ Berm installations shall be done by a Phase II Stormwater Inc. Certified Professional to assure that all the specifications as described will be met and the project will succeed as it was designed.

G. By using Certified Phase II Stormwater Inc. Microbial *FilterMitt*™ Berm for pre- construction, construction and post construction development means that the erosion control devise can be made on site with little or no soil disturbance, or compaction, or it can be delivered in varying section lengths, pre-filled and placed into position where it is needed most. This saves on installation time and costs, as well as environmental impacts.

PART 3.

INSTALLATION, MAINTENANCE, & POST CONSTRUCTION

S 302 INSTALLATION:

A. All Certified Phase II Stormwater Inc. Microbial *FilterMitt™* Berm Installations shall be done by a Phase II Stormwater Inc. Certified professional.

B. If installation is not done by a Certified Phase II Stormwater Inc. Certified Professional, than the installation of the project may not comply with the design specifications and performance standards; the project will be declined.

C. A Certified Phase II Stormwater Inc. Microbial *FilterMitt™* Berm can be constructed on site or delivered prefilled: minimal onsite labor time.

D. Can be tailored to site requirements; individual units can be made in lengths from 1-100 linear feet.

E. When the Certified Phase II Stormwater Inc. Microbial *FilterMitt™* Berm is properly installed, water will not be able to bypass around the ends.

F. Because the Certified Phase II Stormwater Inc. Microbial *FilterMitt™* Berm conforms to the grade, there is no need to re-grade with heavy equipment which causes soil disturbance and creates conditions for more erosion.

G. The movement of heavy equipment compacts the soil which increases flow rate and damages soil structure making it more difficult to establish seed germination.

H. Staking with hardwood stakes at maximum 10 foot intervals ensures stability against water flow for slopes 2:1 and greater. Ends of individual Certified Phase II Stormwater Inc. Microbial *FilterMitt™* Berm are overlapped and staked to ensure integrity on slopes 2:1 and greater. End stakes should be placed no more than one foot from terminal ends on slopes 2:1 and greater. See Figure 2 page 20.

I. Protective fencing is recommended to protect structures from construction disturbance, or vehicle and foot traffic. Fence should be placed in front of the Certified Phase II Stormwater Inc. Microbial *FilterMitt™* Berm. See Figures 1 & 2 pages 19 and 20.

Certified Phase II Stormwater Inc.
9 inch Microbial *FilterMitt™* Berm

PART 3.

INSTALLATION, MAINTENANCE, & POST CONSTRUCTION

S 303 MAINTENANCE

A. To ensure proper functioning, regular inspections, and if necessary, maintenance should take place after installation. Microbial *FilterMitt™* Berm should be inspected immediately by contractor or agent after each rainfall-producing event, and at least daily during prolonged rainfall events. Proper functioning and sediment accumulation should be checked during inspection. Deposited sediments should be removed by contractor, when the level of the deposition reaches approximately one half the effective height of the Microbial *FilterMitt™* Berm.

B. Microbial *FilterMitt™* Berm, Apply Beneficial Microorganisms to the Certified Phase II Stormwater device every two months during the growing season to assure that the Beneficial Microorganisms meet the desired range as described in the Certified Phase II Stormwater Inc. Specifications. Only when meeting these desired ranges can you be sure the Phase II Stormwater Inc. is remediating persistent contaminated pollutants found in the stormwater, as well as improving soil structure, and hydrological conductivity.

C. Identify and remove all invasive plants within the order of conditions footprint once per month during growing season.

D. Apply Beneficial Microorganisms to improve the vigor and vitality of either planted or existing native vegetation.

E. Remove any invasive exotic or native vegetation that may be disturbing the functioning of the stormwater filtering device.

PART 3.

INSTALLATION, MAINTENANCE, & POST CONSTRUCTION

S 304 POST CONSTRUCTION:

A. Leave in place to continue filtering pollutants from storm water run-off.

B. Rake by hand, {no machine for spreading} material used as a soil amendment on existing site.

C. **Certification Disclaimer:**

Phase II Stormwater Inc. warrants only that any product which has been certified and meets Certified Phase II Stormwater Inc. “Certification Program” criteria for such certification and except as expressly set forth herein: Phase II Stormwater Inc. Makes no warranty, express or implied as to any product which has not been certified under the Phase II Stormwater Inc. “Certification Program”, including any warranty as to merchantability or fitness for a particular purposed and Phase II Stormwater Inc. hereby expressly disclaims all other warranties; Phase II Stormwater Inc. shall not be liable for any loss, injury, claim, liability, or damage of any kind resulting in any way from any errors, omissions, content, information, opinions or assessments contained in the Phase II Stormwater Inc. “Certification Program”; and, Phase II Stormwater Inc. shall not be liable, in any event for any incidental, consequential, special, exemplary or punitive damages (including without limitation for lost data, lost profits or loss of goodwill) of any kind or nature arising out of the certification of any product under the Phase II Stormwater Inc. “Certification Program”, whether such liability is asserted on the basis of contract, tort, or otherwise, even if Phase II Stormwater Inc. has been made aware of the possibility of such loss or damage in advance.
